Protect your data and ensure compliance in ServiceNow®

Overview

Stave Data Tools suite provides a comprehensive set of utilities to help organizations protect, secure, and maintain compliance of their data stored in ServiceNow.

Data Tools offers multiple capabilities to Alert, Mask, Scramble, Generate, and Prevent sensitive data from entering your instance of ServiceNow. Ensure security and compliance with your enterprise cloud governance policies.

Data Tools is a comprehensive suite of three applications working in harmony. Data Masker prevents sensitive data from entering or exiting your cloud. Data Generator speeds up testing and increases development quality by creating realistic sample datasets. Data Scrambler ensures you are in compliance by protecting data migrated across instances.

www.staveapps.com/products/data-tools

DATA MASKER
Keep out the problem data

AVOID PII MISTAKES
Automatically prevent users from entering Personally Identifiable Information into the cloud

RECEIVE ALERTS
Log all attempts and receive notifications if certain data is entered by a user

DATA GENERATOR
Build and test with realistic samples

REALISTIC SAMPLE DATA
Save time and improve quality of your testing with proper data to view

FAMILIAR TERMINOLOGY
Descriptions generated are contexually-correct. See technology words in Incident descriptions.

DATA SCRAMBLER
Prod to sub-prod without a problem
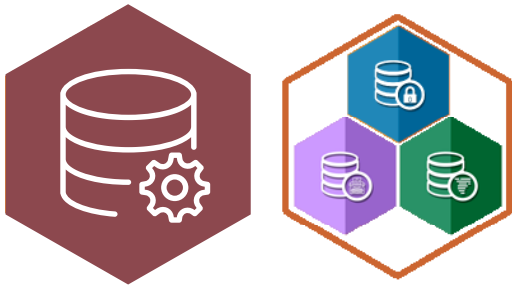

CHANGE DATA ON THE FLY
Mix up your sensitive production data into similar yet different values to maintain privacy and compliance

MAINTAIN IMPORTANT PATTERNS
Maintain important data patterns, in fields such as email addresses that match name field values.

STAVE
BUSINESS APPS TO SIMPLIFY WORK

Instant Integration

Data Tools is a complete suite containing three scoped applications; Data Masker, Data Generator, and Data Scrambler. Together they provide ServiceNow users with powerful data protection capabilities.

Powered by the Platform

All Stave applications are run within the ServiceNow platform, inherit every benefit of the tool, and make use of the powerful accessibility and redundancy of their datacenters.
