

See your Enterprise in a geospatial context for analyzing and understanding services and assets in ServiceNow®

Overview

Stave Maps is a flexible and configurable integration to display any location-based record in ServiceNow® on maps from both Esri® ArcGIS Online™ and Google® Maps™.

Display the location of assets, tasks, personnel and more on your online maps. Configure custom markers, actions, and pop-up displays with your logos and unique labels. Stave Maps integrates with your existing custom ArcGIS Online maps and Google Maps. Maps integrates with the core Location table in ServiceNow and can utilize any type of data that includes latitude and longitude references.

This easy to use solution can maximize your ability to understand your enterprise data and see what can impact your service delivery, asset posture, and logistics workflows.

Esri ArcGIS Online Integration

Use the world's most-popular enterprise GIS platform and visually display your ServiceNow enterprise data on an Esri map.

Google Maps Integration

Use the world's most-popular consumer GIS platform and visually display your ServiceNow enterprise data on a Google map.

Layer Multiple Datasources

Combine any number of tables or datasources on a single map. View related data such as employees with assets, locations with services, equipment with requests, and more to truly understand your enterprise.

Hassle-Free Integration into Your Existing Maps

Integrate your existing custom ArcGIS Online maps within ServiceNow. Integration with the custom ArcGIS Online maps you've already built saves time and money.

Dynamic Visual Controls on Your Maps

Analyze your maps with built-in visualization features such as proximity heatmaps, drill-able pin clusters, custom pin design, and custom tool-tip design.

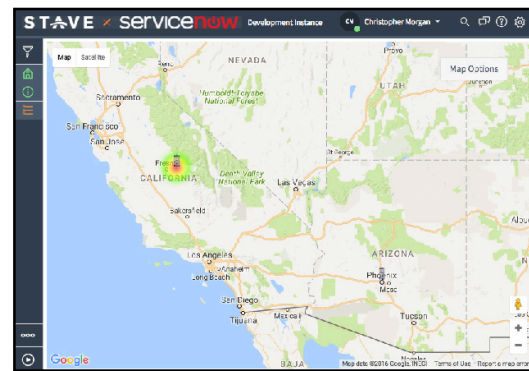

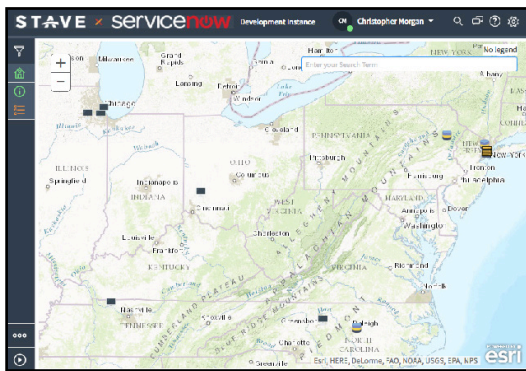

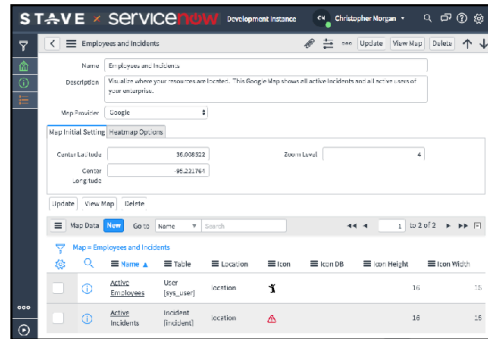

Define the Authoritative View of Data

There's no limit to the way you can express your data, which maximized your efficiency and strengthens your logistical awareness.

Point and Click Simplicity

Stave Maps allows you to define any number of maps based on either Esri ArcGIS Online or Google Maps, and it allows you to do so with a simple point-and-click interface. There's absolutely no need to write complicated JavaScript to display your enterprise data on a map within ServiceNow anymore. Overlay your maps with multiple data sources and display records with customizable pins and tool-tips.

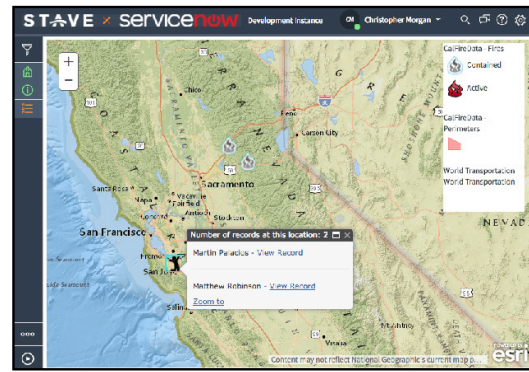

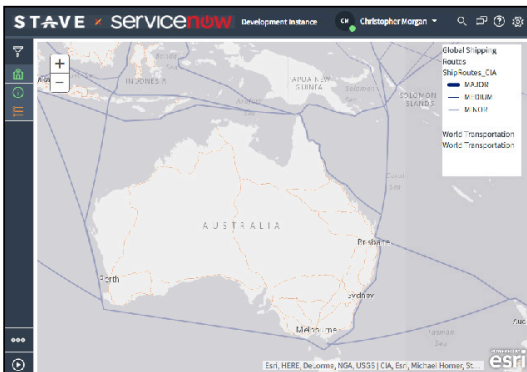

Visualize Asset Location

View where corporate assets are located, and show a unique tool-tip for each, such as the map above showing servers, databases, and employee laptops stored in the CMDB.

Use Heatmaps to Understand Proximity

When you see your data centers and associated problem records visually, you can know exactly where to divert your resources for maximum effectiveness.

View Impacting Events

By adding layers such as sea routes and highways to your maps, you can fully understand how your global business logistics may be impacted.

Crisis Management

With live layers, such as active wildfires, you can track who may be in danger and using roadways, guide them to safety.
