

PORTALMAX

ENGAGING SERVICE PORTALS THAT PROVIDE AN EXTRAORDINARY CUSTOMER EXPERIENCE. TRACKING, WORKFLOW, AND REPORTING.

Rapidly deploy user-centric portals to deliver an amazing and easy to use customer experience. PortalMax provides a collection of ServiceNow templates designed to enhance your brand, your user's experience and drive increased user adoption.

KEY BENEFITS

- Accelerate time-to-productivity by rapidly deploying enterprise service portals using templates
- Eliminate barriers to adoption and use with fully responsive designs developed UX experts for all devices
- Sidestep expensive coding projects with a solution that can be customized by ServiceNow administrators

OVERVIEW

PortalMax provides a drop-in extension to the ServiceNow Service Portal application that allows organizations to quickly use pre-built sleek, intuitive and powerful portals using widgets in a point-and-click environment without coding. PortalMax takes care of the most-common implementations of AngularJS, HTML, and CSS and allows users to focus on function and design using templates and configuration.

Create dynamic self-service portals that include Service Request Management, Incident Management, Knowledge Management, and Service Catalog portal design for end users that look great on any device, from desktops to tablets to smartphones. Administrators can easily configure portals to match their company brand and color schemes and to configure widget options quickly and easily.

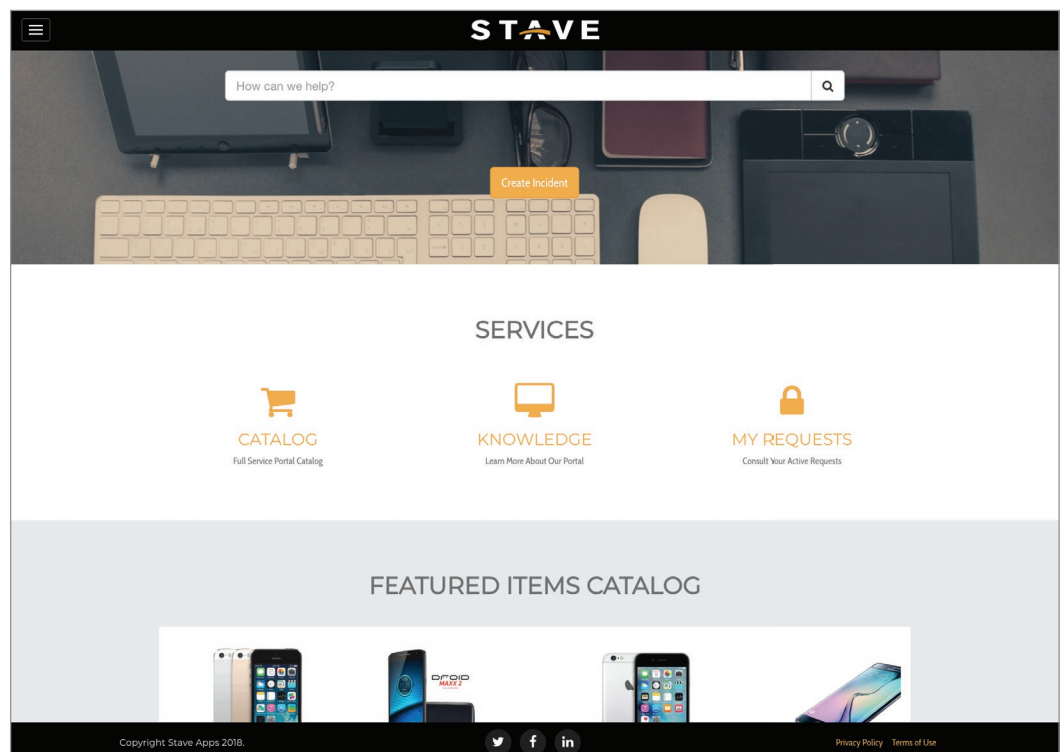

FEATURES

NO-CODE INTERFACE // Accelerate release schedules without inflating development budgets using templates, widgets and themes.

CONFIGURABLE // Brand your portal to match your design and style guidelines using color themes and custom fonts.

TURN-KEY PORTALS, READY TO USE // Seven starter portals provide ready to use functionality that extends ServiceNow Service Portal from day one.

BUILT-IN OUT-OF-THE-BOX FUNCTIONALITY // Deploy instant productivity with built-in solutions for core functions such as Incident Management, Knowledge Base Management, Service Catalog Management, Live Feed and User Profiles.
